SUMMARY

Computer Science student focused on data science, full-stack engineering, and machine learning. Experience building structured data pipelines, backend applications, and AI-assisted systems with emphasis on system design and data-driven problem solving.

EDUCATION

Southeastern Louisiana University

Hammond, LA

B.S. Computer Science (Data Science Concentration)

May 2028

– Major GPA: 4.00/4.00 Honors Scholarship

EXPERIENCE

STEM Student Engineer

March 2026 – Present

Southeastern Northshore STEM Center

SLU, Hammond, LA

- Configured and maintained robotics platforms, embedded systems, and VR hardware for instructional use.
- Provided technical support for lab operations, troubleshooting, and STEM outreach activities.

Student Web Developer

Sept 2025 – March 2026

Internet Resource Center, SLU

Hammond, LA

- Developed and maintained academic web tools and internal systems in collaboration with faculty, supporting instructional and administrative workflows.
- Contributed to system documentation, iterative improvements, and AI-assisted prototypes, including participation in conference presentations on academic software tools.

Software Intern

June 2025 – Dec 2025

IT Nepal Solution

Kathmandu, Nepal

- Developed full-stack application using Django, REST APIs, authentication systems, and relational database.
- Contributed to feature development, debugging, and maintenance of production-ready systems in a team environment.

PROJECTS

ML Risk Classification System | Python, scikit-learn, XGBoost

- Built a machine learning pipeline for structured dataset classification across 3,200 U.S. counties.
- Implemented preprocessing, feature engineering, and evaluated multiple models achieving F1=0.82 and ROC-AUC=0.95.

Data Visualization & Processing System | Python, Pandas, Streamlit

- Built data analysis for structured dataset ingestion, transformation, and statistical analysis.
- Developed interactive CLI and Streamlit interface for exploratory data visualization workflows.

Real-Time Chat System | React, Node.js, MongoDB, Socket.IO

- Built full-stack real-time messaging system with authentication and user management.
- Implemented event-driven communication architecture using WebSockets for live updates.

LLM Document Assistant | Python, Gemini API

- Built a retrieval-based LLM assistant for academic Q&A using Gemini and Google File Search over course materials.
- Defined instruction-based response rules to guide document usage and handle fallback for non-retrieval queries.

TECHNICAL SKILLS

Python, Java, TypeScript, C# — React, Node.js, Django, .NET

Machine Learning, Data Systems, LLM Applications

Pandas, NumPy, scikit-learn, XGBoost, Streamlit

MongoDB, SQL, REST APIs, Socket.IO, Git
